

# Influence of Stream Restoration on Aquatic Communities

National Stream  
Restoration Conference  
August 2022

Bethany Mulhall  
Kentucky Department of Fish and  
Wildlife Resources

Jessica Massure  
Minnesota Department of Natural  
Resources

## All about us....

- Kentucky Wetland and Stream Fee-in-Lieu-Of Mitigation Fund (FILO)
- Mission: Perform wetland and stream mitigation under the Clean Water Act
- Over 300 million dollars in receipts to date
- 100 Projects
- 11 Service Areas

Pre-Restoration

Post-Restoration

Table 1. Minors Creek Stream Restoration Project Monitoring Schedule

| Data Collection |   | As-Built | Year 1 |      | Year 2 |      | Year 3 |      | Year 4 |      | Year 5 |      |
|-----------------|---|----------|--------|------|--------|------|--------|------|--------|------|--------|------|
|                 |   |          | Early  | Late | Early  | Late | Early  | Late | Early  | Late | Early  | Late |
| Hydrology       | Flow type & bankfull flow evidence  | X        |        | X    |        | X    |        | X    |        | X    |        | X    |
|                 | BHR, MWR, and W/D measurements  | X        |        |      | X      |      |        |      |        |      | X      |      |
| Geomorphology   | Cross-sections & profiles   | X        |        |      | X      |      |        |      |        |      | X      |      |
|                 | BEHI evaluation   |          | X      |      | X      |      | X      |      | X      |      | X      |      |
|                 | Visual inspection of channels and structures; photograph and document areas of erosion        | X        | X      |      | X      |      | X      |      | X      |      | X      |      |

## Questions

- Can we optimize restoration designs for aquatic habitat?
- Which habitat types influence fish and macroinvertebrate communities?

Fitzpatrick et al 2008

## Landscape

- Land Use
- Ecoregion
- Bioregion
- River Basin

## Watershed

- Basin length
- Slope
- Perennial stream length
- Drainage area
- Drainage density
- Drainage shape
- Land use

## Reach

- Vegetation
- Sinuosity
- RBP
- Channel modification
- Mitigation type
- Stream order
- Land use
- Reach slope
- Riffle slope
- Glide slope
- BEHI
- W/D
- ER
- Bankfull area
- Floodprone width
- Max pool depth
- Dominant substrate
- Habitat length or %
- Discharge
- Water Chem (DO, pH, temperature)
- Macro-invertebrates

## Cell

- Instream habitat cover
- Canopy cover
- Min/Max depth & velocity
- Microhabitat type
- Dominant substrate
- Fish

## Methods

### Site Selection

- Pre-and-Post-Restoration
  - 2 yr Pre-Construction (min.)
  - Fish, macroinvertebrates, habitat
  - Annual targets

### Reach Selection

- Restoration type
- Position in watershed

## Status

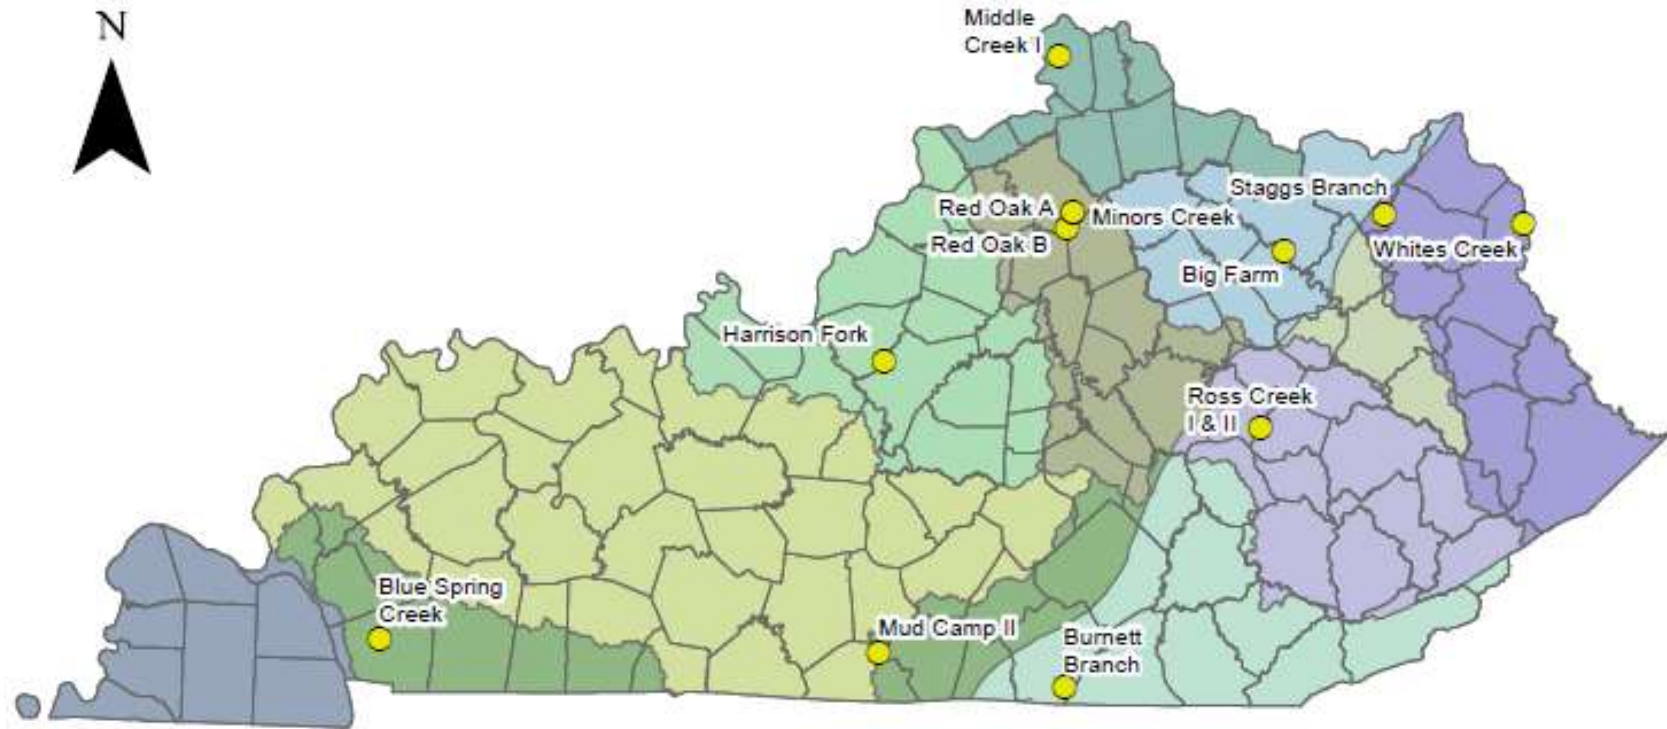

# FILO Projects- USGS Sampling Sites

## Legend

- |  |                             |                             |
|--|-----------------------------|-----------------------------|
| FILO Project Sample Sites              | Jackson Purchase Area       | Salt River Area             |
| Northern Kentucky                      | Lower Cumberland River Area | Upper Cumberland River Area |
| Big Sandy River Area                   | Lower Kentucky River Area   | Upper Kentucky River Area   |
| Green River and Tradewater River Areas | Lower Licking River Area    | Upper Licking River Area    |

## Future

- Increase data collection
- Analyze data
- Identify restoration techniques with greatest influence on aquatic communities
- Create monitoring protocol for intermittent streams-terrestrial biota (amphibians)

## Data Analysis

### Multivariate Statistics

- Principal Component Analysis
- Hierarchical Linear Regressions
- Similarity Indices
- Species Diversity and Evenness
- Non-metric Multi-dimensional Scaling (NMDS; pre-and-post restoration comparisons)

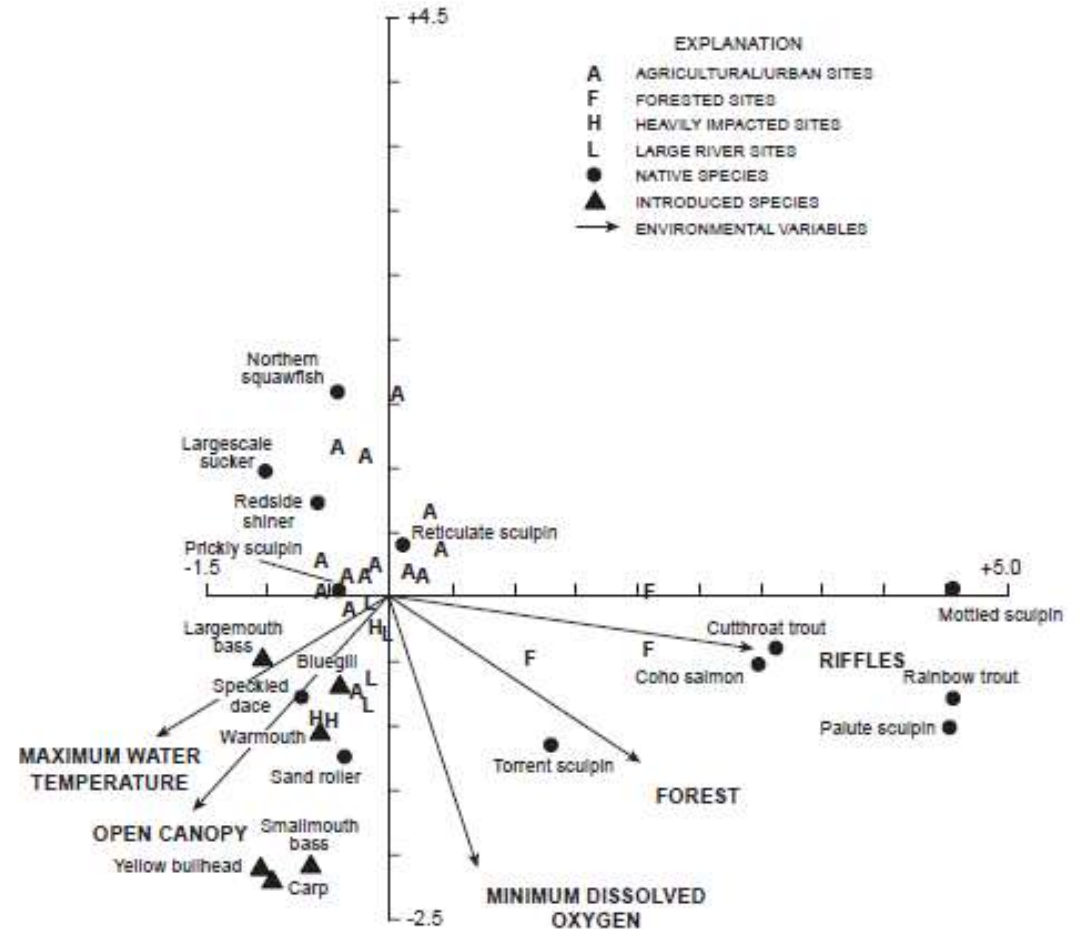

Figure 16. Results from canonical correspondence analysis of fish relative abundance and five environmental variables in the Willamette Basin, Oregon.

A man wearing a hat and a light-colored shirt is standing in a forest, holding a large fish. The background is filled with trees and foliage. The entire image has a green tint.
